

## Run time of each program

Program	Run time(s)
Apriori	5914.828136
FP-Growth	74.917425
Recursive Elimination	22.639959
Close and Max	216.758641

## Environment

Windows 版本

Windows 10 家用版

© 2018 Microsoft Corporation. 著作權所有，並保留一切權利。

系統

製造商: ASUSTek Computer Inc.

型號: GL502VT

處理器: Intel(R) Core(TM) i7-6700HQ CPU @ 2.60GHz 2.59 GHz

已安裝記憶體 (RAM) 16.0 GB (15.9 GB 可用)

系統類型: 64 位元作業系統，x64 型處理器

手寫筆與觸控: 此顯示器不提供手寫筆或觸控式輸入功能。

RAM	16GB
CPU	Intel i7-6700HQ
System	Windows 10 64 bit

## Summary

Execution time of Apriori is the longest as time is wasted in producing candidates every time, multi scans of transaction DB is required for generating candidate sets, larger memory space is also required during the generation candidate sets.

Execution time of FP-Growth is smaller than Apriori, since it scans the transaction DB only twice, and due to compact structure and no candidate generation, therefore the ram usage is also smaller.

Execution time of Recursive Elimination is the fastest, it is based on deleting items, recursive processing, and reassigning transactions, especially superiority

increases with a lower values of the minimum support, i.e. min\_support = 150

## Result for Closed and Maximal Frequent Itemset

number of total frequent item set 19126

number of closed frequent item set 18650 (start from page 2)

number of maximal frequent item set 2399 (start from page 189)

### Closed Frequent Itemset:
